

CONTIBAC[®] RX

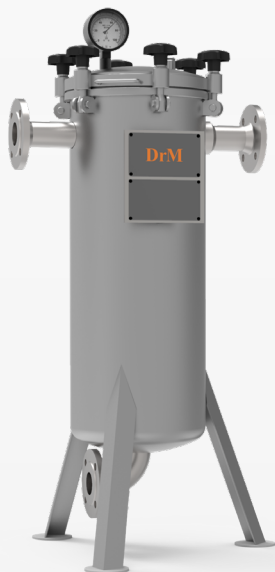

Thickening of fine solids in low concentration

In solid-liquid separation fine particles often appear as suspensions of large volumes with a low solids concentration. The large filtration area required to handle such streams is resulting in large filter housings, structures, plant footprints and corresponding high CAPEX and OPEX.

CONTIBAC[®] RX allows to work with up to four times more filter area than traditional solutions.

Typical applications

- Silicon slicing coolant recycling
- Chlor Alkali brine polishing
- Solids recycling from various effluents

Key advantages

- Long service life
- Low maintenance
- Low spare parts cost
- Low energy consumption
- Submicron particle retention
- Scalable system with 10 m² and 15 m²-modules
